MICTONIO. 3:1579-1586(1989).
FUNCTION: MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS RICKETTSIAL VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION. SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A S-LAYER WITH HEXAGONAL SYMMETRY.
DISEASE: RICKETTSIA RICKETTSII IS THE CAUSATIVE AGENT OF ROCKY MOUNTAIN SPOTTED FEVER (RMSF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MISCELLANEOUS: ITS C-TERMINUS POTENTIALLY MAY CONFERRING ANTIGENICITY TO THE PROTEIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        membrane proteins, especially by PCR. The proteins are also use in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, but the protein and protein as the prote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein Omp4 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see X06816) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see W88417-28), and nucleic acid sequences encoding them (see X06816-27). A new species specific test is claimed that is used to identify mammals (Including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer

(PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting
                                                        (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                 encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they be used as primers and probes for diagnostic polymerase chain reaction

                                                                                                                                                                                                                                                                                                                                                                invention provides 12 novel surface exposed proteins, Omp4-Omp15 (See W88417-28), and nucleic acid sequences encoding them (see X06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.

The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chlamydial infection; sexually transmitted disease; pelvic inflammatory disease; PID; tubal obstruction; in trachoma; blindness; acute respiratory tract infection; atherosclerosis; coronary heart disease; antibacterial.
                                                                          The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infections in humans and is a major cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also the leading cause of preventable blindness worldwide.
                                                                                                                                                                                                                                                                                                       Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence \,\cdot\,
                                                                                                                                                                                                                                                                                                                                                                          WPI; 2000-431303/37

are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine
                                      vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia infection.
                                                                                                                                                                                                                                                                                                           Claim 19; Fig 15-E;
                                                                                                                                                                                                                                                                                                                                                    Novel antigens and corresponding DNA molecules that can be used to prevent, treat and diagnose disease caused by Chlamydia infection mammals, especially humans -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chlamydia antigenes and the proteins they encode, useful vaccinating against Chlamydia infections that affect the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Murdin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                        Y34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see X91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumonian nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Respiratory disease; pneumonia; bronchitis; heart di
sinusitis; purulent otitis media; erythema nodosum;

                                                                                                                                                                                                                                                                                                                                    The present sequence is that of Chlamydia pneumoniae antigenic protein CPN100624 RY-64, a putative outer membrane protein. It is an example of C. pneumoniae antigenic polypoptides of the invention (see Y9543-55) that are encoded by open reading frames (see A50030-42) Identified in the C. pneumoniae genome. The polypoptides are useful in the diagnosis, treatment and prevention of Chlamydia infection. They can be prepared by recombinant methods using transformed unicellular host cells. The polypoptides, or immunogenic fragments of them, or fusion proteins that include an additional polypoptide such as a heterologous signal nearting are accounted to the polypoptide such as a heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel Chlamydia polynucleotides and polypeptides useful for diagnosis, prevention and treatment of Chlamydia infection in mammals \boldsymbol{\cdot}

                                                   Y34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see X91990) of Chlamydla pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Y35083 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                  C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The nucleic acids may be used for the recombinant production of the Chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlamydia infections in mammals. Chlamydia, such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Y36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see Z01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q
                             The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C trachomatis in the prevential protein is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is major cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the
